(57) Abstract :

The present invention relates to an innovative Ayurvedic and herbal-based pharmaceutical formulation for the supportive management and treatment of cancer. The formulation combines selected mineral bhasmas Ras Kapur Bhasma (Calcinated Camphor), Shuddh Gandhak (Purified Sulphur), and Itkari Bhasma (Calcined Alum) with a synergistic blend of medicinal plant extracts, including Tecomella undulata (Red Sandalwood bark), Fagonia cretica (Wid Indigo), Moringa oleifera (Drumstick bark), Bauhinia variegata (Mountain Ebony), Solanum nigrum (Black Nightshade), Boerhavia diffusa (Punarnava), Berberis aristata (Indian Barberry), Vachellia nilotica (Desi Kikar bark), Azadirachta indica (Neem bark), Curcuma longa (Turmeric), Tagetes erecta Tagetes patula (Marigold), and Citrus limon (Lemon peel). The ingredients are processed using standardized purification, calcination, and extraction methods to enhance safety, bioavailability, and therapeutic efficacy. The formulation exhibits antioxidant, immunomodulatory, cytoprotective, and anti-inflammatory activities, making it suitable as a complementary therapy alongside conventional cancer treatments. It provides a natural, safe, and holistic approach to support prevention, management, and treatment of various cancer types, with reduced side effects and improved patient tolerance. By integrating classical Ayurvedic principles with modern therapeutic requirements, the invention offers a scientifically validated, reproducible, and cost-effective alternative to conventional oncological therapies.
